Annual Weather Related Fatalities

10 year average: 1997-2006

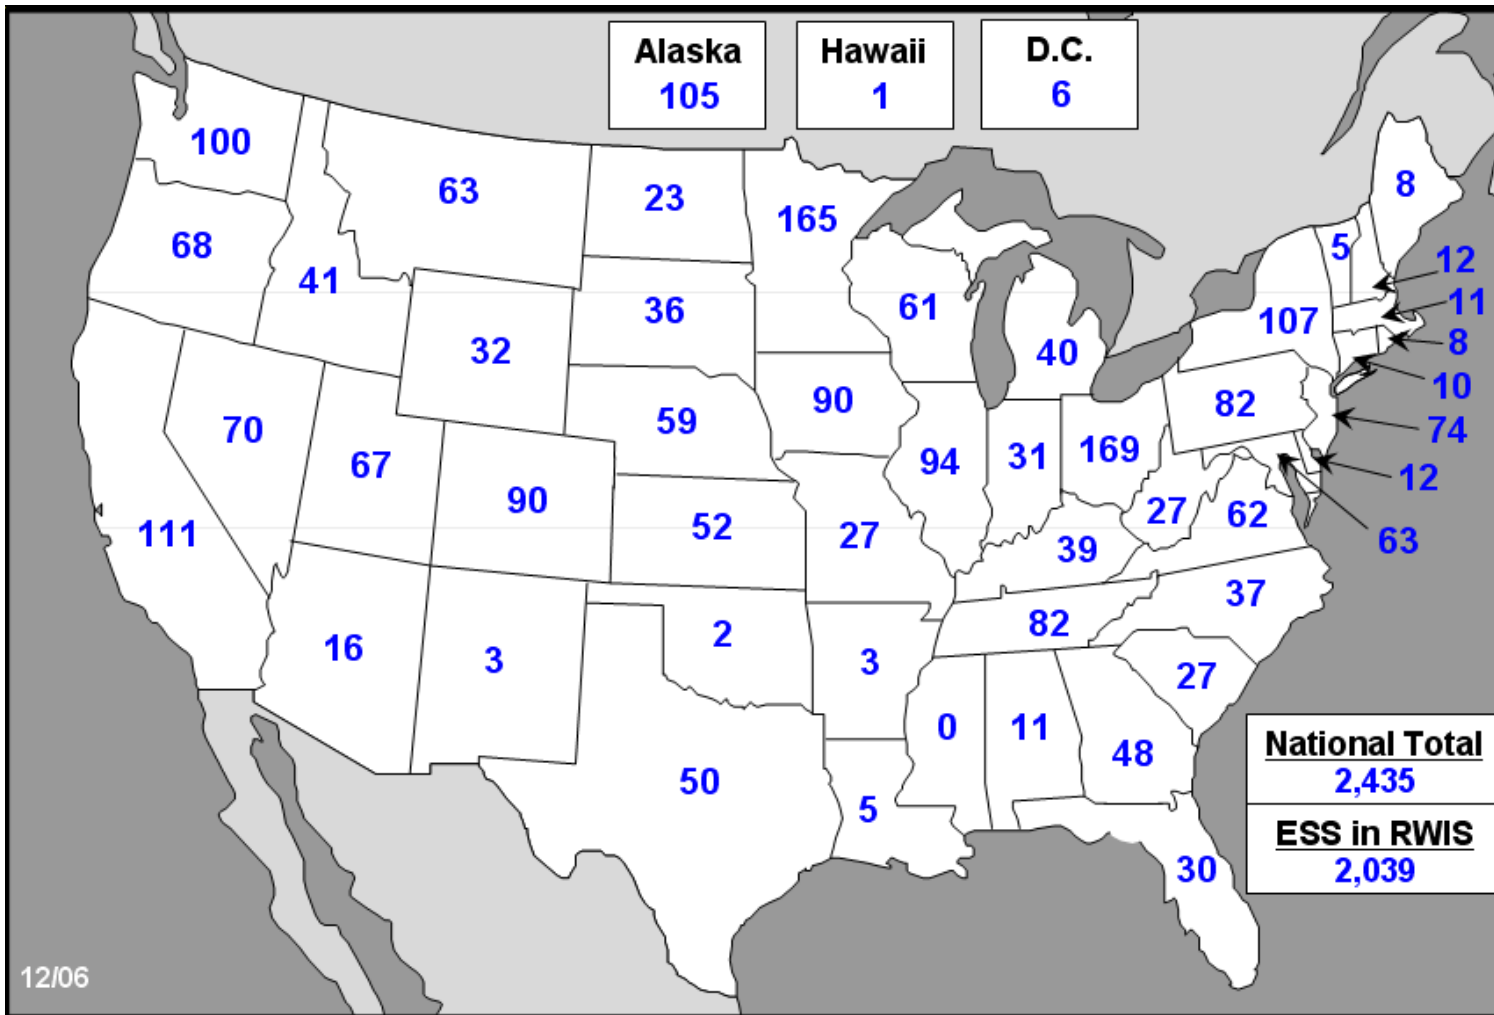

Annual Weather Related Fatalities

ESS Owned by State DOTs

An Environmental Sensor Station (ESS) is any site with sensors measuring atmospheric conditions, pavement conditions, and/or water level conditions.

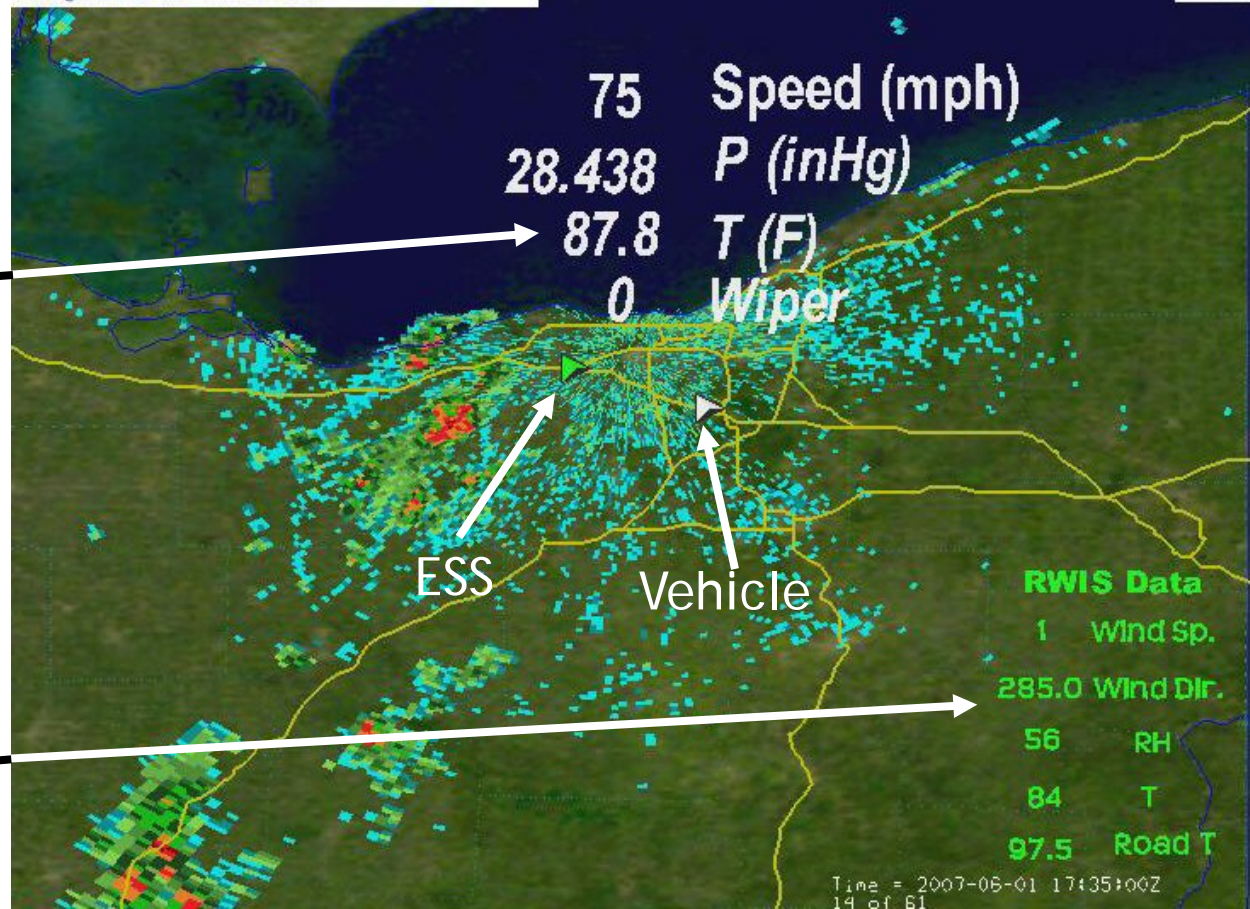

Vehicle-based data:

- Speed (mph)
- Pressure (in Hg)
- Air Temperature (F)
- Wiper State
 - 0=Off
 - 1-5=Intermittent
 - 13=On Low
 - 14=On High

ESS Data

- Wind Speed/Dir
- Air Temp/RH
- Road Temp

Pre-VII Proof of Concept Research June 1 2007

Setup:

- Vehicle heading west along I-80/Ohio Tnpk (white triangle)
- Subset of vehicle sensor data are captured
- Data are correlated with radar each volume
- Road weather station data are also captured (green triangle)

Wiper State: Off

Vehicle Air Temperature

Vehicle Pressure

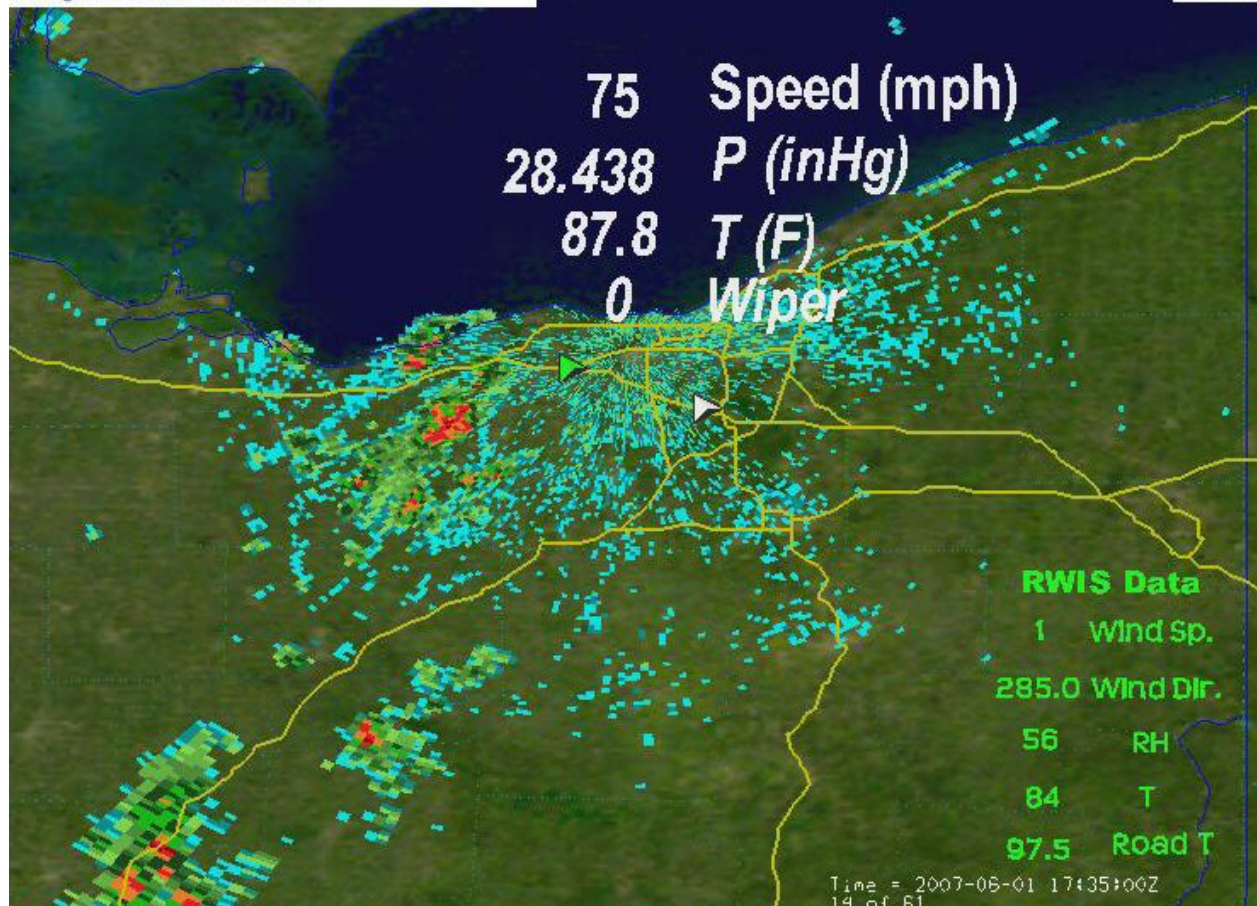

Vehicle Speed

ESS Air Temperature

ESS Road Temperature

Wiper State: Off

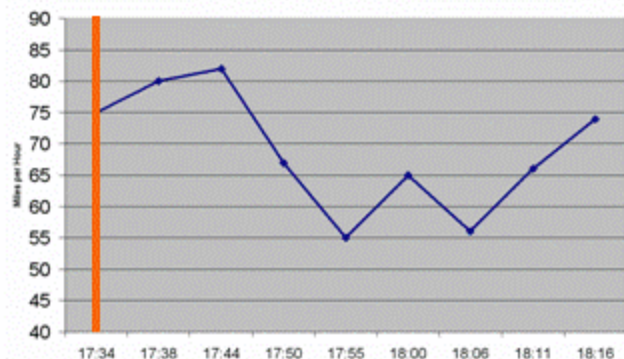

Vehicle Air Temperature

Vehicle Pressure

Vehicle Speed

ESS Air Temperature

ESS Road Temperature

Vehicle-based Probe Data Elements

Barometric Pressure

Brake Status & Boost

Headlight Status

External Air Temperature

Fog Status

Position, Heading, Acceleration & Vehicle Speed

Anti-lock Braking System

DTR Thermal Profile (Air Temp)

Average Temperature, All DTR Sections: 999J Ambient

Congestion Modifying Road Temps

MoWL Van: 3/23/2006

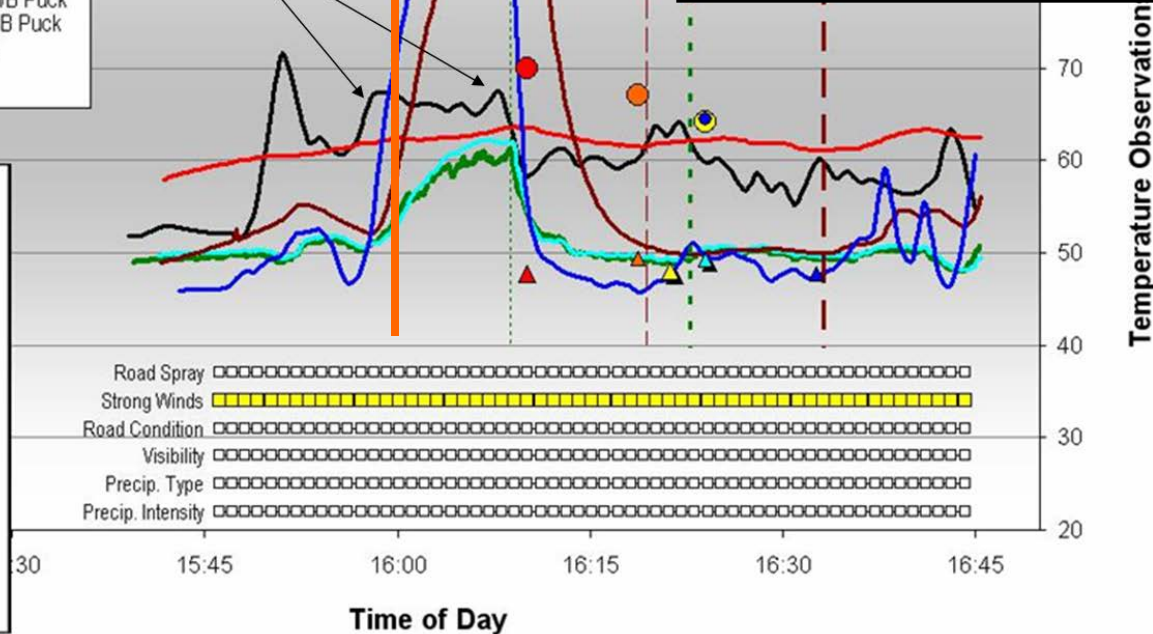

Snap Shot

Time: 15:57:53

- 999J Ambient
- 999J IR Surf. Avg.
- Front Bumper
- Rear Bumper
- Front IAT
- OBD IAT Avg.
- ▲ Eastern ESS, WB Air
- ▲ Western ESS, WB Air
- ▲ IAD ASOS
- ▲ Western ESS, EB Air
- ▲ Eastern ESS, EB Air
- Eastern ESS, WB Puck
- Western ESS, WB Puck
- Western ESS, EB Puck
- Western Optical
- - - DTR WB Entry
- - - DTR WB Exit

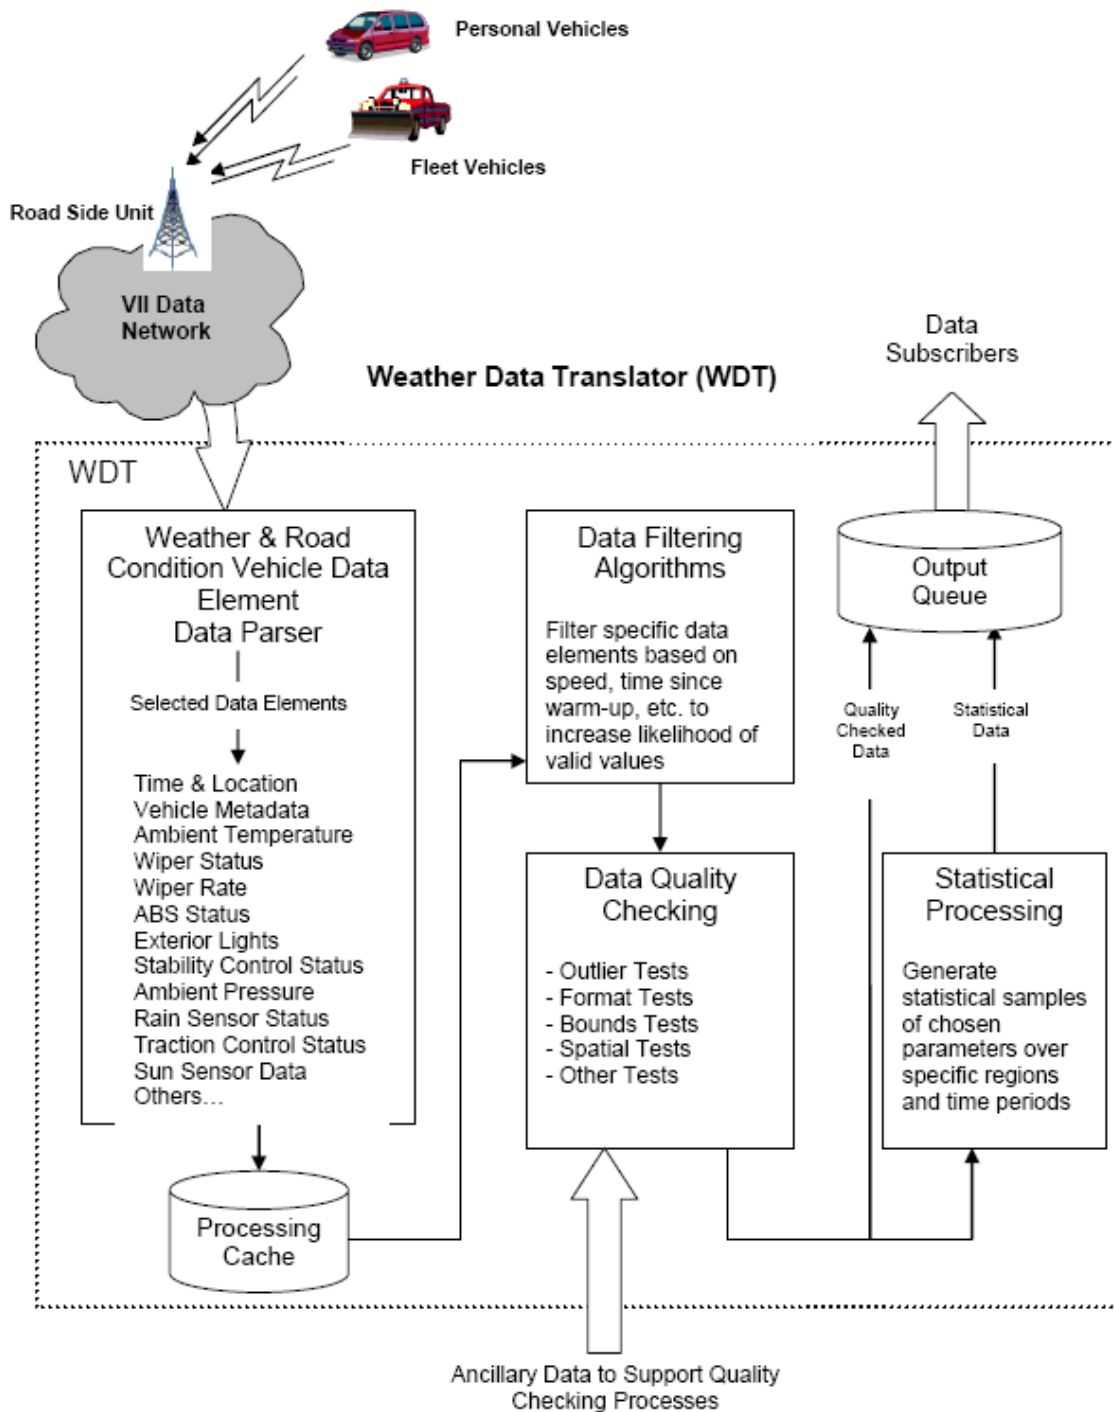

Road temperature modification during heavy traffic

- Precipitation Intensity**
- none
 - light
 - moderate
 - no heavy
- Precipitation Type**
- none
 - drizzle
 - rain
 - snow
 - no freezing rain, sleet
- Visibility**
- good
 - light fog
 - snow
 - no dense fog, rain, ice
- Road Conditions**
- dry
 - wet
 - no slushy, snow covered
- Strong Winds**
- no
 - yes
- Road Spray**
- no
 - yes
 - data not available

Weather Data Translator

Derived Observations

- Combines vehicle-based data with in situ or remote-sensed data to infer or derive a new field. Potential fields include:

Derived Elements	Sources
• Air temperature ←	Obs Ta, ESS
• Precipitation occurrence (yes, no) ←	Wiper, Radar
• Precipitation intensity (none(NP), light(LGT), moderate(MDT), heavy(HVY)) ←	Wiper, Radar
• Precipitation type (liquid, frozen) ←	Obs Ta, ESS
• Barometric pressure ←	Obs Pr, ESS
• Pavement condition (not slippery, slippery) ←	Obs VTC/VSC
• Frictional Index (0.0 - 1.0) ←	Derived
• Vehicle Speed ←	Obs Speed

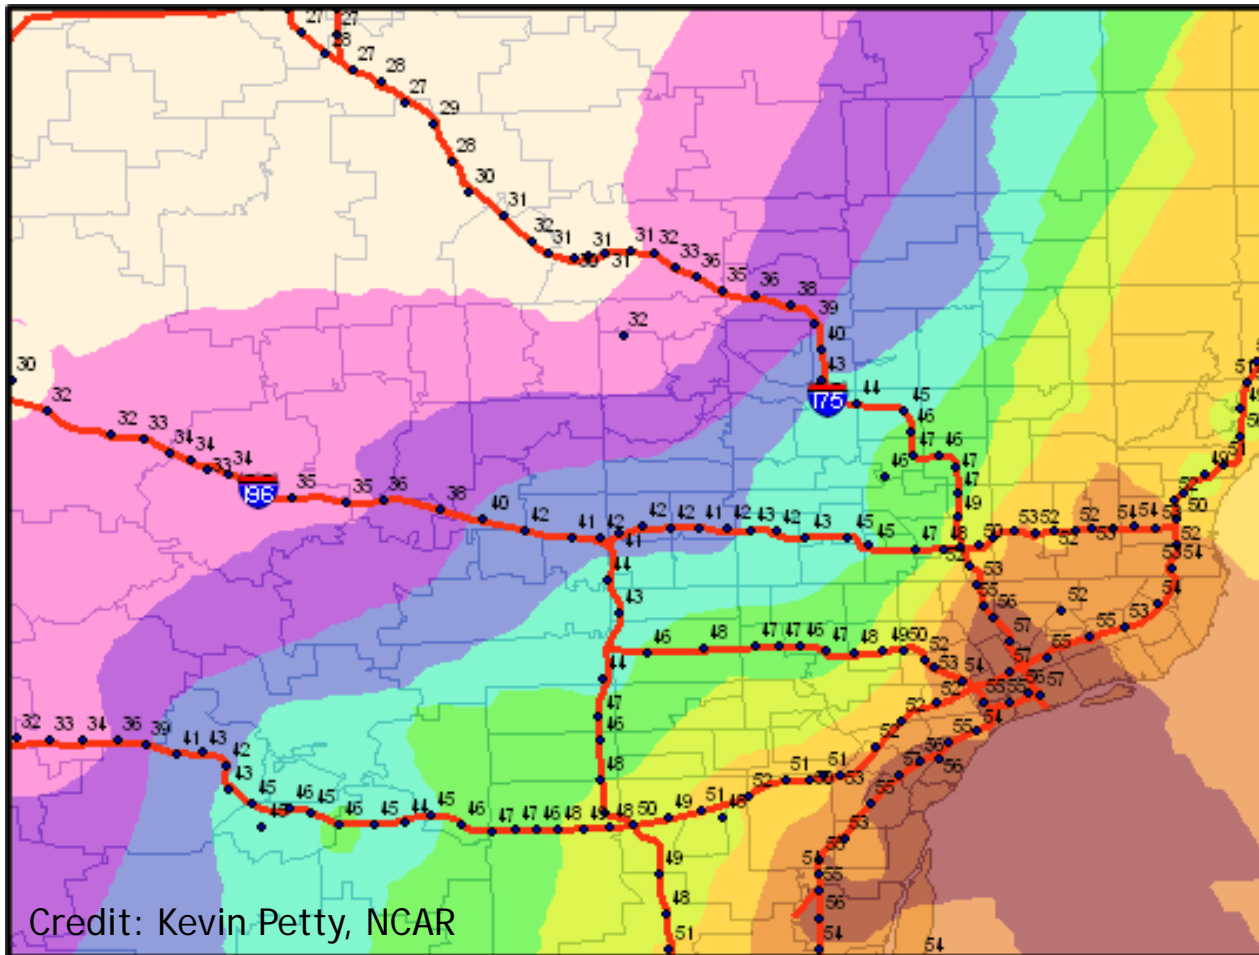

Research Questions

- How many probe data samples are needed to obtain quality observations?
- How often should vehicle-based observations be generated?
- Should observations be synchronized to clock time or radar volume times?
- How long should a road segment be?
- Should these definitions be consistent in urban & rural regions, during commuting times & at night?

Our Vision

- Increasing quality surface observation data density from thousands to millions

Credit: Kevin Petty, NCAR
